

Recorra 
Real Recycling

Safe Battery & Vape Consolidation

Follow these four simple steps:

1

Empty Collection Points Regularly

Collect batteries and vapes from designated recycling points in your workplace. Check with your supervisor if you are unsure where this is located.

2

Consolidate Into a Central Container

Empty contents into your designated Battery & Vape Recycling container to get ready for collection.

3

Arrange Regular Collections

Do not allow containers to overfill by ensuring you have regular collections scheduled.

4

Report Anything Unusual

If you find damaged, leaking, swollen, or overheating batteries and vapes, notify your supervisor immediately.

Special Requirements

Lithium Batteries

Cover exposed terminals with tape before placing these in the collection container to minimise fire risk.

Lead-Acid Batteries

Do not place lead-acid batteries in Battery & Vape containers. These require separate collection arrangements. Contact Recorra's Helpdesk at 020 7407 9100 to arrange.
